REASON FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Mohaban et al (US 7,209,473 B1) A processor architecture for processing data packets representing voice over Internet Protocol (VoIP) calls in a packet-switched network is disclosed. According to an embodiment, a VoIP processor executes a voice packet processing operating system that is configured to monitor or manipulate the packets at an IP layer, media layer and signaling layer of the call. The VoIP processor executes one or more application programs that selectively call one or more of the primitive software functions and are independent of any underlying protocols of the existing network, thereby isolating the application programs from low-level processing details.

Lo et al (US 6,798,786 B1) A method and system of managing calls over a data network includes determining an available bandwidth of the data network. After a call request is received for establishing a call between at least two network terminals, one or more of a plurality of resource elements are selected in response to the call request based on the bandwidth of the data network. The resource elements, which can include codecs (coders/decoders), packet sizes (for carrying audio data), and others, are used in the requested call between the at least two network terminals. One or more usage threshold

Art Unit: 2444

values may be assigned to a link or links between communities, and a call request is processed based on the one or more usage threshold values.

Krishnaswamy et al (US 6,909,708) Telephone calls, data and other multimedia information including video, audio and data is routed through a switched network which includes transfer of information across the internet. Users can participate in video conference calls in which each participant can simultaneously view the video from each other participant and hear the mixed audio from all participants. Users can also share data and documents with other video conference participants. Users can manage more aspects of a network than previously possible, and control network activities from a central site.

However, the prior art records, individually or in combination, fail to explicitly teach or render obvious that a method comprising:

reserving a Quality of Service (QoS) resource pool, wherein the QoS resource pool comprises a predetermined portion of available bandwidth between a first reservation protocol proxy and a second reservation protocol proxy, wherein the first reservation proxy represents a first network device coupled in communication with a packet network and associated with a first user community wherein the second reservation proxy represents ~~and~~ a second network device coupled in communication with the packet network and associated with a second user community for real-time communication sessions among users of the first user community and the second user community;

Art Unit: 2444

providing end-to-end application QoS between the first user community and the second user community by selectively admitting a plurality of real-time communication sessions between the first user community and the second user community based upon currently available resources associated with the QoS resource pool and multiplexing the plurality of real-time communication sessions over a common reservation protocol session between the first reservation proxy and the second reservation proxy;

wherein said reserving a predetermined portion of available bandwidth between the first reservation protocol proxy and the second reservation protocol proxy includes pre-allocating the reservation protocol session over a path through the packet network between the first network device and the second network device; and

wherein the reservation protocol session comprises a Resource Reservation Protocol (RSVP) session, wherein the first network device and the second network device are part of a geographically distributed VoIP network, wherein the packet network comprises the VoIP network as set forth in independent claims 1, 10, and 11 (as disclosed in specification paragraphs 00099-000102, 000120-000124 and 000146-000148).

Dependent claims 4-9, and 12-17 further limit the allowed independent claims 1, 10, and 11; therefore, there are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee, and avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reason for Allowance."
